

## **Practice Workshop on Innovative Community End-of-life Care in Hong Kong**

The JCECC project has piloted innovative community end-of-life care (EoLC) service projects over the past 3 years. A common goal of these projects is to enhance holistic care for families facing advanced illnesses, through facilitating multi-disciplinary collaboration between medical and social sectors. This workshop will invite four NGO partners of the JCECC project, including The Hong Kong Society for Rehabilitation, Haven of Hope Christian Service, St. James' Settlement and SKH Holy Carpenter Church District Elderly Community Centre, to share their unique service models in EoLC services. Challenges, barriers and practice wisdom will be discussed. Health and social care professionals who are interested in and planning to develop EoLC services in their respective settings are welcomed.
